

Slit FPC

Can be used instead of a fine-wire coaxial cable or wire harness!

Slit-processed FPC that is excellent in flexibility and enables “twisting” or “torsion” is widely used as a substitute of a fine-wire coaxial cable, wire harness, and medical equipment cable. Slit FPC offers greater flexibility to a customer because a slit can be specified in spacing or width.

Features

- Easy-to-bend cable FPC that is slit-processed by 0 mm between patterns
- Can be used with “twisting” or “torsion” applied as compared with the conventional products.
- Slit spacing and width can be specified.
